## ◆ Testing in Beta

The purpose of this report is to record all functional (including mobile responsiveness) accessibility, and content testing that has been conducted by Invuse within the beta phase and to document results. These findings will then be added to Monday.com for development (Annertech) and any relevant results from the content or accessibility report will be fed back to the content team at Haringey to shape iterations and improvements as we move into the beta phase.

## ◆ What is being tested

This test plan focuses on the main elements of the website to ensure all features are working as expected and there are no major issues or regressions across the system that would cause problems in a live environment. We will test a:

- homepage
- service landing page
- service sub landing page
- service page (3 per section)
- step by step + step page
- guide + guide page
- directory + directory page (Venue / Organisation)

## ◆ Outputs of testing

The testing outputs have been broken down for reporting purposes into:

- functional testing
  - structure
  - navigation
  - usability
  - zoom
- mobile responsiveness
- accessibility testing
  - labels and arias
  - colour contrast
  - alt text
  - keyboard navigation
  - screen reader usability
- content testing
  - links
  - titles and headers
  - reading age

all findings from the testing are listed in the relevant section.
